## HW\#1 Solutions (Due September 09, 2008)

4. $\mathrm{n}=20 \quad \Sigma \mathrm{X}=333.3$
a) $\overline{\mathrm{X}}=16.67 \mathrm{~min}$.
b) $\quad \mathrm{s}=6.73 \mathrm{~min}$.
c) $\quad$ median $=14.5 \mathrm{~min}$.
d) No evidence of outliers using the $\overline{\mathrm{X}} \pm 3$ s rule (16.67 $\pm 3(6.73)$ : -3.52 to 36.86) the sample mean is a better measure of location.
e) NOT ASSIGNED FOR HOMEWORK but will be used as class notes.

| Class | f |
| :---: | :---: |
| $6-10.9$ | 3 |
| $11-15.9$ | 9 |
| $16-20.9$ | 3 |
| $21-25.9$ | 2 |
| $26-30.9$ | 2 |
| $31-35.9$ | 1 |

f) Males
$\mathrm{n}=10$
$\overline{\mathrm{X}}=13.01 \quad$ median $=13.25$
$\mathrm{s}=2.70$
Females
$\mathrm{n}=10$
$\overline{\mathrm{X}}=20.32 \quad$ median $=19.35$
$\mathrm{s}=7.65$
Females scores much higher and more variable.
5.
e) $n=8$

$$
\left[\frac{\mathrm{n}+2}{4}\right]=\left[\frac{10}{4}\right]=[2.5]=2
$$

$\mathrm{Q}_{1}=77, \quad \mathrm{Q}_{3}=91$.
f)

6. $\overline{\mathrm{X}}=210 \mathrm{~s}=22.8$
$\begin{array}{lll}68 \% \text { between } & \overline{\mathrm{X}} \pm \mathrm{s} & 210 \pm 22.8=(187.2,232.8) \\ 95 \% \text { between } & \overline{\mathrm{X}} \pm 2 \mathrm{~s} & 210 \pm 45.6=(164.4,255.6) \\ \text { Almost All } & \overline{\mathrm{X}} \pm 3 \mathrm{~s} & 210 \pm 68.4=(141.6,278.4)\end{array}$
8.
a) $\quad \mathrm{Q}_{3}=39$
b) $\quad \mathrm{Q}_{1}=26$
c) $\quad \mathrm{IQR}=\mathrm{Q}_{3}-\mathrm{Q}_{1}=39-26=13,1.5(\mathrm{IQR})=19.5$
$\mathrm{Q}_{1}-1.5 \mathrm{IQR}=26-19.5=6.5$
$\mathrm{Q}_{3}+1.5 \mathrm{IQR}=39+19.5=58.5$
The maximum is 68 , therefore there are outliers on the high end.
10.
a) 2
b) 9
c) Canadian patients have fewer visits (mean $=4$ ) as compared to US patients $($ mean $=6$ ).
