## Math 335-002 * Spring 2015 * Quiz \#1

1. Consider the following vector operations. Which of them do/does not make sense? If the expression is valid, indicate whether the result is a vector or a scalar (number)
a) $((\overrightarrow{\mathbf{a}} \times \overrightarrow{\mathbf{b}}) \cdot \overrightarrow{\mathbf{b}}) \times \overrightarrow{\mathbf{c}}$
b) $((\overrightarrow{\mathbf{a}} \times \overrightarrow{\mathbf{b}}) \times \overrightarrow{\mathbf{b}}) \cdot \overrightarrow{\mathbf{c}}$
c) $(2 \overrightarrow{\mathbf{a}}+\overrightarrow{\mathbf{b}}) \cdot(\overrightarrow{\mathbf{a}}-\overrightarrow{\mathbf{b}}) \times \overrightarrow{\mathbf{c}}$
d) $(\overrightarrow{\mathbf{a}}+\overrightarrow{\mathbf{b}}) \cdot(\overrightarrow{\mathbf{a}}-\overrightarrow{\mathbf{b}}) \cdot \overrightarrow{\mathbf{c}}$
e) $((\overrightarrow{\mathbf{a}} \times \overrightarrow{\mathbf{b}}) \times \overrightarrow{\mathbf{b}}) \times \overrightarrow{\mathbf{c}}$
2. Write down an equation of plane containing points $(0,1,2),(1,2,3)$ and $(1,2,1)$ (hint: first, you will need a cross product to find the normal to this plane)
3. Find the derivative of the following function: $f(x)=x \ln \left(x e^{x}\right)$
