## BME 310 Biomedical Computing

### **CLASS HOURS**

Tuesday Wednesday 1:00 pm – 2:25pm (Fenster 640) Tuesday 8:30 am – 8:55am (Fenster 640)

### **OFFICE HOURS (Fenster 610)**

M, T, R, F 12pm – 1pm Or by appointment (973) 596 3193 joelsd@njit.edu

### **TEXT**

Signal Processing First, McClellan, Schafer & Yoder ISBN: 0130909998
Supplemental handouts are found on <a href="http://web.njit.edu/~joelsd">http://web.njit.edu/~joelsd</a>

### **COURSE DESCRIPTION**

Prerequisites: BME 301 and Math 112. This course covers the application of digital signal processing to biomedical problems. Labview, a graphical programming language common in engineering, is used for both signal acquisition and processing. Applications include analysis of the electrocardiogram and other electrical signals generated by the body.

### LEARNING OUTCOMES

By the end of the course you should be able to do the following:

- **Digital Signal Processing:** Understand the fundamental principles of digital signal processing. In particular, gain knowledge in Fourier Series, Fourier Transforms, FIR, Frequency Response, and Sampling. Apply knowledge of math, engineering and science to identify, formulate, and solve problems in these areas.
- **Data Interpretation:** Learn to utilize Labview software to design and analyze data. Apply knowledge of math, engineering and science to interpret data. Develop an understanding of and develop the skills necessary to communicate findings and interpretations in an effective laboratory report.
- **Biomedical Signal Processing:** Apply knowledge of math, engineering and science to understand the principle of biomedical signal processing. Understand how to apply specific mathematical techniques to solve problems in the areas of biomedical signals.
- Work in Multi-disciplinary teams: Learn to work and communicate effectively with peers on multi-disciplinary teams to attain a common goal.

**COURSE OUTLINE\*** 

# COURSE OUTLINE\*

| Date     | Topic/Lecture                            |   | Material   | Class work                                  | Reading/Problem<br>Assignment |
|----------|--|---|--|---|-------------------------------|
| 09/05/17 | Introduction to Signal and Systems       | 1 | Chapters 1   | In-class discussion;                        | See Notes                     |

\*The Course Outline may be modified at the discretion of the instructor or in the event of extenuating circumstances. Students will be notified in class of any changes to the Course outline and schedule of laboratory sessions.

### **GRADING**

Homework and Matlab Programming: 10%

Class participation: 10%

Laboratory Exercises (including Lab reports): 20%

Exam 1: 15% Exam 2: 15% Final Exam 30%

Attendance is mandatory. Failure to attend class regularly will result in a failing grade. No makeup examinations will be administered. If a valid, documented excuse for a missed exam is provided, the weight of the Final Exam will increase to compensate for the missed grade.

### LABORATORY EXERCISES

BME 311 uses a laboratory exercises to supplement to the conventional lecture and recitation format. In general, each session will begin with a mini-lecture, followed by the laboratory exercise. These exercises are challenge-driven and require that you are fully engaged in the learning process. The laboratory exercise will be team oriented (maximum of 3 people per team) and the team will be responsible form maintaining a laboratory notebook. Each of the team members will be expected to design the initial solution, laboratory exercise coordinator (the person who coordinates the team for the laboratory exercise), take measurements, interpret the data, validate the results, and write the lab report in the laboratory notebook. The responsibilities of the team members will be

different for each exercise, e.g., each team member must have the opportunity to write the lab report, to construct the initial design, etc.

### **Guidelines for Laboratory Reports**

Your team is expected to maintain a laboratory notebook which will track the progress of each laboratory exercise. For each laboratory exercise, the lab notebook must contain

- 1. (prior to class) the lab exercise
- 2. (prior to class) a solution to the problem posed (e.g., the design of your program in terms of a block diagram),
- 3. (in class) the working program (Labview block diagrams) and collect results (e.g., Labview screens demonstrating that their program works),
- 4. interpretation and validation that the results are correct using the material discussed in class,
- 5. what was learned in the exercise (e.g., use of Labview, troubleshooting, etc.)
- 6. note the team members and their responsibilities:
  - a. initial solution designer
  - b. laboratory coordinator
  - c. measurement taker
  - d. data interpreter
  - e. results validation person
  - f. lab report writer

Written lab reports must be submitted one-week after the laboratory exercise, unless otherwise specified\*. Please note: reports that are submitted without evidence of participation in the laboratory exercise will be considered plagiarism and will result in dismissal from the course. You cannot copy the experimental results of others and claim credit.

### **Honor Code Violations/Disruptive Behavior:**

NJIT has a zero-tolerance policy regarding cheating of any kind and student behavior that is disruptive to a learning environment. Any incidents will be immediately reported to the Dean of Students. In the cases the Honor Code violations are detected, the punishments range from a minimum of failure in the course plus disciplinary probation up to expulsion from NJIT with notations on students' permanent record. Avoid situations where honorable behavior could be misinterpreted.

No eating or drinking is allowed at the lectures, recitations, workshops, and laboratories. Cellular phones must be turned off during the class hours.

**BME 310:** Learning Outcome Summary

| Strategies and<br>Actions   | Student Learning Outcomes   | Outcomes (a-m)        | Prog.<br>Object. | Assessment<br>Methods/Metrics  |  |  |  |
|---|---|-----------------------|------------------|--|--|--|--|
| processing. In particular   | gital Signal Processing: Understand r, gain knowledge in Fourier Series, Foledge of math, engineering and science   | ourier Transforms, FI | R, Frequency     | y Response, and  |  |  |  |
| Biomedical signal processing with applications are covered in class lectures, homework, and laboratory assignments.   | Understand the fundamental principles of signal processing and system analysis.   | A,B,D,E,G,K           | 1, 2             | Tests, homework,<br>studio exercises,<br>and laboratory<br>reports are<br>graded.                              |  |  |  |

### ABET Outcomes expected of graduates of BME BS program by the time that they graduate:

- (A) an ability to apply knowledge of mathematics, science, and engineering
- (B) an ability to design and conduct experiments, as well as to analyze and interpret data
- (C) an ability to design a system, component, or process to meet desired needs within realistic constraints such as economic, environmental, social, political, ethical, health and safety, manufacturability, and sustainability
- (D) an ability to function on multi-disciplinary teams
- (E) an ability to identify, formulate, and solve engineering problems

- (F) an understanding of professional and ethical responsibility
- (G) an ability to communicate effectively
- (H) the broad education necessary to understand the impact of engineering solutions in a global, economic, environmental, and societal context
- (I) a recognition of the need for, and an ability to engage in life-long learning
- (J) a knowledge of contemporary issues
- (K) an ability to use the techniques, skills, and modern engineering tools necessary for engineering practice.
- (L) an understanding of biology and physiology
- (M) the capability to apply advanced mathematics (including differential equations and statistics), science, and engineering to solve problems at the interface of engineering and biology
- (N) an ability to make measurements on and interpret data from living systems
- (O) an ability to address problems associated with the interaction between living and non-living materials and systems
